PERSONAL PROJECTS

Activity Center

- A website built using Asp.Net Core Framework, Entity Framework and MySQL. User can login/register. Both login and registration forms do have custom validations. The home page contains a list of activities and the user who is in session can join or leave them if he already joined it. If activity expires, it gets removed from the list. User can also add an activity.

Survey Polls

- Project built using Angular.js, Express.js for and MongoDB. It is a website where a user can login using their name. After logging in, user is redirected to the home page where they are able to see a list of polls so he can vote for any of it. User is also able to create his own poll, so other users who would login later could vote.

Travel App

- Project built using Django Framework and MySQL. It is a website which contains login/registration page with custom validations. After login part, user is redirected to the home page which contains a list of locations where users prefer to travel. User who is in session can join any of it or can add his own location.

EDUCATION

Web Developing

Coding Dojo
